      This paper describes a polynomial time algorithm HAM that searches for Hamilton cycles
      in undirected graphs. On a random graph its asymptotic probability of success is that of
      the existence of such a cycle. If all graphs with n vertices are considered equally likely,
      then using dynamic programming on failure leads to an algorithm with polynomial
      expected time. Finally, it is used in an algorithm for solving the symmetric bottleneck
      travelling salesman problem with probability tending to 1, ...

3 Integrating stochastic performance analysis with system design tools   ▬
      Charles W. Rose, Marcus Buchnen, Yatin Trivedi
      June 1985 **Proceedings of the 22nd ACM/IEEE conference on Design automation**
      Publisher: ACM Press
      Full text available: 📄 pdf(773.53 KB)   Additional Information: full citation, abstract, references, citings, index
                                                                     terms

      SPA is a stochastic performance analysis utility which is part of the N.2 System Design
      Environment. It allows performance analysis of a system under design within the same
      environment that the behavioral design itself takes place, and at multiple levels of
      abstractions.
